

Agentic Pre-Development Workspace for Enterprise Delivery Teams

Theme 01 · AI at Work

Productivity + Teamwork

Team: Nexa | Members: Biswambhar Pal, Owendrila Saha

Problem Statement

The Hidden Tax Before Development Starts

Every requirement conversation creates value - but too much of that value is still trapped in meetings, chats and manual follow-ups.

Requirements are getting lost between conversations and delivery

Modern teams do not lack meetings - they lack a trusted, AI-assisted system that turns meeting context into approved execution artifacts.

Digital work overload

57%

Average Microsoft 365 time is spent communicating in meetings, email and chat - only 43% creating.

Execution fatigue

64%

People say they struggle to find enough time and energy to do their job.

Innovation risk

60%

Leaders are concerned that lack of breakthrough ideas is already affecting teams.

Real-world impact

Before developers write code, teams spend hours reconstructing what was decided, creating BRDs, Jira stories, technical designs, estimates and test cases manually. The result is delayed delivery, inconsistent handoffs, missed edge cases, and weak traceability from business intent to implementation.

Why it matters

This is directly inside the Microsoft work graph: Teams meetings, Outlook, M365 files, Azure DevOps and enterprise knowledge.

Solution Overview

Conversation-to-delivery automation

A Power Platform-based AI workspace that converts requirement transcripts into governed, role-approved delivery artifacts.

Power Pages

Power Automate

Copilot Studio

AI Prompts + Dataverse

Autonomous Project Management

Nexa.ai captures meeting context once, then orchestrates AI agents and approval flows to create a trusted pre-development agentic package.

Requirement Pack

BRD, scope, assumptions, acceptance criteria.

Delivery Backlog

Epics, stories, subtasks, estimates and dependencies.

Technical Design

Architecture notes, algorithm, API/data model guidance.

QA Coverage

Test cases, edge case scenarios and traceability matrix.

Feasible POC

Starts with manual transcript upload; scales later to Teams/DevOps integrations without changing the user workflow.

Architecture Diagram

Power Platform Reference Architecture

AI governed enterprise-ready architecture for transcript-driven pre-development automation.

User Experience

Workflow + Approvals

AI Agents + Prompts

Data + Governance

AI Integration Details

AI integration – Copilot and AI Prompts

Role-specific AI agents convert unstructured meeting text into structured, reviewable delivery artifacts.

Grounded Generation

Specialist Agents

Human Approval

Responsible AI

Nexa.ai uses Power Platform AI prompts and Copilot Studio agents to generate artifacts with source grounding, confidence and review gates.

Demo Screens

Demo Screen – Project Pipeline

The screenshot displays a web browser window with the URL `https://nexa-ai-enterprise-portal.powerappsportals.com/project-details/?id=092ff863-4c66-f111-9b48-6045bd4a2587`. The page title is "Project Pipeline". Below the title, a subtitle reads: "Track the AI-powered pre-development journey from transcript intake to approved development guidance."

A "Process view" box states: "Each project moves through BRD review, technical design, user stories, QA test cases, and developer guidance. Generated artifacts appear below."

The "CURRENT PROJECT" section shows "Nexa Project" with three status tags: "Stage: BRD Review", "Status: Pending Review", and "AI: Generated".

The "Project Actions" section includes the text "Continue the project intake, review generated artifacts, or return to the dashboard." and three buttons: "Upload Transcript", "My Approvals", and "Back to Dashboard".

The pipeline consists of five numbered steps:

- 1 BRD / Requirements**
Owner: Business Analyst
Status: Pending Review (yellow bar)
Action: View / Review (blue button)
- 2 Technical Design**
Owner: Tech Lead
Status: Not Started (grey bar)
Note: Artifact not generated yet
- 3 User Stories**
Owner: Scrum Master
Status: Not Started (grey bar)
Note: Artifact not generated yet
- 4 QA Test Cases**
Owner: QA Lead
Status: Not Started (grey bar)
Note: Artifact not generated yet
- 5 Developer Guidance**
Owner: Developer
Status: Not Started (grey bar)
Note: Artifact not generated yet

The Windows taskbar at the bottom shows the date and time as 04:21 PM on 12-06-2026, along with weather (34°C, Mostly sunny) and various application icons.

Impact Metrics

Impact & success metrics

Measurable outcomes for productivity, quality, governance and enterprise adoption — built for a realistic Power Platform POC.

Productivity

Quality

Governance

Adoption

Nexa.ai is designed to prove value quickly: reduce manual pre-development effort, improve traceability, and make AI outputs accountable.

Cycle Time

↓ **60–70%**

From transcript to first approved BRD, stories, TDD and QA drafts.

Manual Effort

↓ **50%+**

Less repeated documentation work across BA, Scrum, Tech and QA roles.

Traceability

100%

Every story, design note and test case mapped back to requirement context.

Approval Control

100%

Human review gate before export, backlog creation or development handoff.

Success =

Speed + Quality + Governance + Microsoft Platform Adoption

A working demo should show measurable handoff acceleration without removing human accountability from delivery decisions.

Current Phase

Pilot KPI 1
Compare manual vs AI-assisted time for the same transcript.

Pilot KPI 2
Count AI outputs accepted, edited, rejected or regenerated.

Pilot KPI 3
Measure coverage of requirements mapped to stories and tests.

Pilot KPI 4
Track active users, approvals and exports from Power Platform.

Enterprise Scale

ROI

Microsoft Value

Nexa.ai - value to Microsoft

A focused AI-at-work solution that turns Microsoft 365 conversations into governed Power Platform workflows.

Extends Microsoft 365

Drives Power Platform

Builds Trustworthy AI

Creates Enterprise Pull

Why Nexa.ai Adds Value to Microsoft

Nexa.ai is not just an app - it is a repeatable enterprise pattern for converting collaboration data into accountable business execution.

1. Makes M365 work actionable

Turns Teams/meeting transcripts into approved requirements, stories, technical design and QA coverage.

2. Showcases Power Platform AI

Uses Power Pages, Power Automate, Copilot Studio, AI prompts and Dataverse as the core solution stack.

3. Increases trusted AI adoption

Adds human approval, source grounding, versioning and role-based access before outputs become official.

4. Creates enterprise demand

Solves a universal delivery problem across consulting, IT, product, operations and software teams.

Core value

From Copilot assistance to business process transformation

Nexa.ai demonstrates how Microsoft AI can move beyond summarization into governed, measurable delivery workflows.

5

Role-based agents mapped to real delivery personas

1

Power Platform backbone for scalable solution

100%

Human approval before official handoff

End to End

Transcript → artifacts
→ approval → export

POC

Feasible now, scalable later

Team Introduction and Live Prototype details

Nexa.ai was built by a focused two-member team: **Biswambhar Pal** and **Owendrila Saha**.

Biswambhar Pal

Solution Architect and AI Power Platform Lead

- Defined the problem statement, solution scope, and product flow.
- Built the Power Pages portal, Dataverse structure, and Power Automate orchestration.
- Managed lookup relationships, approval flow, pipeline tracking, and demo preparation.

Owendrila Saha

AI Experience and Product Strategy Lead

- Designed AI prompt flows for transcript analysis and artifact generation.
- Supported the portal user experience across dashboard, project, pipeline, approvals, and admin screens.
- Tested generated outputs, validation logic, and end-to-end demo readiness.
